# Covid-19 Vaccination Campaign in Germany

The data used here were provided by Robert Koch Institute and the German federal ministry of Health.

These institutions publish the datasets and some analysis on the page impfdashboard.de.

# Setup

#### **Imports**

```
In [73]: # standard library
import datetime
import math

In [74]: # third party
import numpy as np
import pandas as pd
import matplotlib.pyplot as plt
import requests
import seaborn
```

## Date this Notebook was run

```
In [75]: today = datetime.datetime.today().strftime('%Y-%m-%d')
today
Out[75]: '2021-05-12'
```

#### Set Defaults

```
In [76]: # style like ggplot in R
plt.style.use('ggplot')

In [77]: # Avoid cutting off part of the axis labels, see:
    # https://stackoverflow.com/questions/6774086/why-is-my-xlabel-cut-off-in-my-matplotlib-plot
plt.rcParams.update({'figure.autolayout': True})
```

localhost:8888/lab 1/17

```
In [78]: | population_germany = 83_200_000
```

#### Get and Transform Data

```
In [79]: vaccination_data_permalink = 'https://impfdashboard.de/static/data/germany_vaccinations_timeseries_v2.tsv'
    vaccinations = pd.read_csv(
        vaccination_data_permalink,
        sep="\t")
```

#### Drop unnecessary / misleading columns

Columns with names starting with 'indikation\_' will not be analyzed as the data providers stopped updating them.

```
In [80]: cols_to_drop = vaccinations.columns[vaccinations.columns.str.contains('indikation_')]
vaccinations.drop(columns=cols_to_drop, inplace=True)
```

Some more columns can be dropped, as there is no interest in analyzing differences on a vaccine level - especially since in some cases vaccines were mixed.

Some columns are labeled misleadingly. As stated by the data provider the columns personen\_erst\_kumulativ and impf\_quote\_erst contain people vaccinated with the Johnson & Johnson vaccine. As this requires only one shot, the same persons are included in personen\_voll\_kumulativ. Therefore more columns are dropped and recalculated later.

```
In [82]: vaccinations.drop(columns=['impf_quote_erst', 'impf_quote_voll'], inplace=True)
```

Convert datatype of date column

```
In [83]: vaccinations.iloc[ : , [0]] = vaccinations.iloc[ : , [0]].apply(pd.to_datetime)
```

#### Show Data

localhost:8888/lab 2/17

```
RangeIndex: 136 entries, 0 to 135

## Last Update

Often the data is not updated on weekends, so get the highest date in the dataset.

```
In [94]: last_update = vaccinations.loc[vaccinations.index[-1], "date"].strftime('%Y-%m-%d')
last_update
Out[94]: '2021-05-11'
```

## **Doses Used**

```
In [95]: doses = vaccinations.loc[ : , ['date', 'dosen_differenz_zum_vortag']]
# Rename columns
doses.columns = ['date', 'doses used']
In [96]: # Scale number of doses as millions
doses['doses used'] = doses['doses used'] / 1_000_000
```

## **Doses Daily**

```
In [97]: doses_daily = doses.set_index('date', inplace=False)
    doses_daily.tail(1)
```

localhost:8888/lab 5/17

```
Out[97]: doses used

date

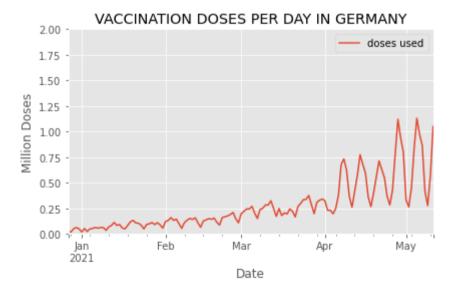

2021-05-11 1.047865
```

```
In [98]: # What is the highest number of doses used in a day?
max_doses_daily = max(doses_daily['doses used'])
